

Technical Data Sheet

Neutralizing Solutions

Description

These neutralizing solutions are used to lower the pH of spent Caustic Developers including Thermal and Violet chemistries. They may be used with Neutralizing Equipment such as Metafix, Procam, and etc., or it may be used manually with pH Hydriion paper. These Neutralizers will not harden or crystallize in the neutralizing tanks or lines.

Available Solutions

Our Solutions are available in various concentrations depending on the plate developer and neutralizing equipment being used. Call for an exact replacement of the competitors' solution

Neutralizing Directions

Use according to Neutralizing Equipment instructions. When using manually add small portions of Neutralizing Solution to spent caustic developers, mixing thoroughly. Repeat until the pH of the spent developer has been lowered enough to discharge according to Local, State and Federal Regulations.

SUPER CONCENTRATE

Our Neutralizing Concentrates are highly concentrated versions of our Neutralizing Solutions. Dilution rates range from 1-quart making 5-gallons through 1 to 1 concentrates. Available in various forms depending on the plate developer and neutralizing equipment being used. Call for the appropriate product for your needs.

Ready to use available in 5-gallon and 55-gallon drums.

Concentrate Available in gallons and 5-gallons.
