

Technical Data Sheet

Metal Plate Finisher

Description

This proven Universal Plate Finisher will protect all aluminum printing plates from oxidation for up to 1-week. This product contains an additive which prevents mold growth, and it will not gum up the processor. It contains an additive called "Plate Prep" which conditions the aluminum non-image area and reduces the roll up time on press by up to 30%. It is available ready to use and as a 1 to 4 concentrate.

Plates Processed

Metal Plate finisher works with all aluminum Conventional, Thermal, and Violet printing plates.

Finishing Directions

Finish at room temperature. Do not rinse with water. When finishing by hand, buff dry with cotton pad.

SUPER CONCENTRATE

Our Metal Plate Finisher Concentrate is used as a 1 to 4 concentrate. 1-gallon of Concentrate will make 5-gallons of Finisher. No special mixing equipment required. This product has additives and buffers to handle all water conditions including high and low pH, and hard and soft water conditions.

Ready to use available in gallons, 5-gallons and 55-gallon drums.

Concentrate Available in quarts and gallons.
