

Clean Concrete; Remove Dried Concrete - without Harsh Chemicals

Forget about caustic muriatic acid!

Safely remove dried concrete, cement, stucco and similar cement-based products or simply clean them with our biodegradable *Jobz Concrete Cleaner and Dissolver*.

1. Spray it on undiluted and completely saturate hardened concrete. For thick accumulations, first chip away with a chisel or needle scaler
2. When it foams, you know it's working
3. Let it soak in for 10 to 15 minutes until concrete turns to mush. If it dries to a white residue, reapply it
4. If necessary, use wire or nylon brush, trowel or putty knife to break free portions that still stick
5. Rinse with cold water from a hose or high pressure washer
6. Multiple applications may be required for thick concrete concentrations

- Biodegradable
- Apply undiluted; rinse with cold water
- Removes rust and oxidation
- Contains a metal-protecting rust inhibitor
- Available in three container sizes
- Not for use on polished aluminum or glass

USE IT ON

Your tools, equipment, vehicles and other work surfaces.

Choose from five, 55 and 250 gallon plastic containers and then phone with your order.
