

For Difficult Machining

# Jobz Heavy Duty Cutting Fluid

Your broaching, drilling, boring, grinding and other difficult machining operations go easier with our medium viscosity *Jobz Heavy Duty Cutting Fluid*.

It's formulated for ferrous metals such as carbon steel, cast iron and stainless steel. Caution: it may cause staining on nonferrous metals such as brass and aluminum.

It's long lasting due to a high reserve of active sulfur and calcium extreme pressure additives. The combination allows the sulfur to extend your tool life, while the calcium provides rust protection.

Expect higher speeds and feeds with minimal smoking and improved surface finishes due to less Built-Up Edge (BUE).

- Formulated for difficult machining of ferrous metals
- Active sulfur extends tool life
- Free of chlorine and phosphorus for lower disposal costs
- Readily filterable
- Improves surface finishes due to less Built-Up Edge (BUE)

Order a supply today in plastic quarts, gallons and five gallon containers or metal 55 gallon drums.
